<http://www.typescriptlang.org/docs/tutorial.html>

- Build by Microsoft in 2012 (1st public)
- Strong collaboration between Angular 2 and TypeScript team
- Angular 2 codebase written in TypeScript
- Why use it?
 - ES2015+ features
 - Safety type-check
 - Intellisense and autocomplete
 - Better tooling support -> Refactoring

The screenshot shows the Angular.io website's style guide. The browser address bar displays <https://angular.io/styleguide>. The page has a blue header with the Angular logo and navigation links: FEATURES, DOCS, EVENTS, NEWS, and GET STARTED. A left sidebar contains a search bar and a table of contents with sections like QUICKSTART, TUTORIAL, BASICS (highlighted), and DEVELOPER GUIDE. The main content area is titled 'Custom Prefix for Components' and 'Style 02-07'. It provides guidelines on using custom prefixes for component selectors, with examples like 'toh' for Tour of Heroes and 'admin' for an admin feature area. It also lists reasons for this practice: preventing name collisions, making it easier to promote features, and ensuring easy identification of components and elements. A red box highlights an 'AVOID' example: `app/heroes/hero.component.ts`. Below this, a code block shows a TypeScript snippet for a component selector.

9. Style Guide

DEVELOPER GUIDE

Custom Prefix for Components

Style 02-07

Do use a custom prefix for the selector of our components. For example, the prefix `toh` represents from **T**our of **H**eroes and the prefix `admin` represents an admin feature area.

Do use a prefix that identifies the feature area or the app itself.

Why? Prevents name collisions.

Why? Makes it easier to promote and share our feature in other apps.

Why? Our Components and elements are easily identified.

AVOID: `app/heroes/hero.component.ts`

```
1. /* avoid */
2.
3. // HeroComponent is in the Tour of Heroes feature
4. @Component({
5.   selector: 'hero'
6. })
```

Lazy Loading

How to split?

Lazy Loading via Routes!

Via routes!

Automatic Lazy Loading

Route 1

Automatic Lazy Loading

Route 2

Standard Angular 1.x render architecture

Application

Template:

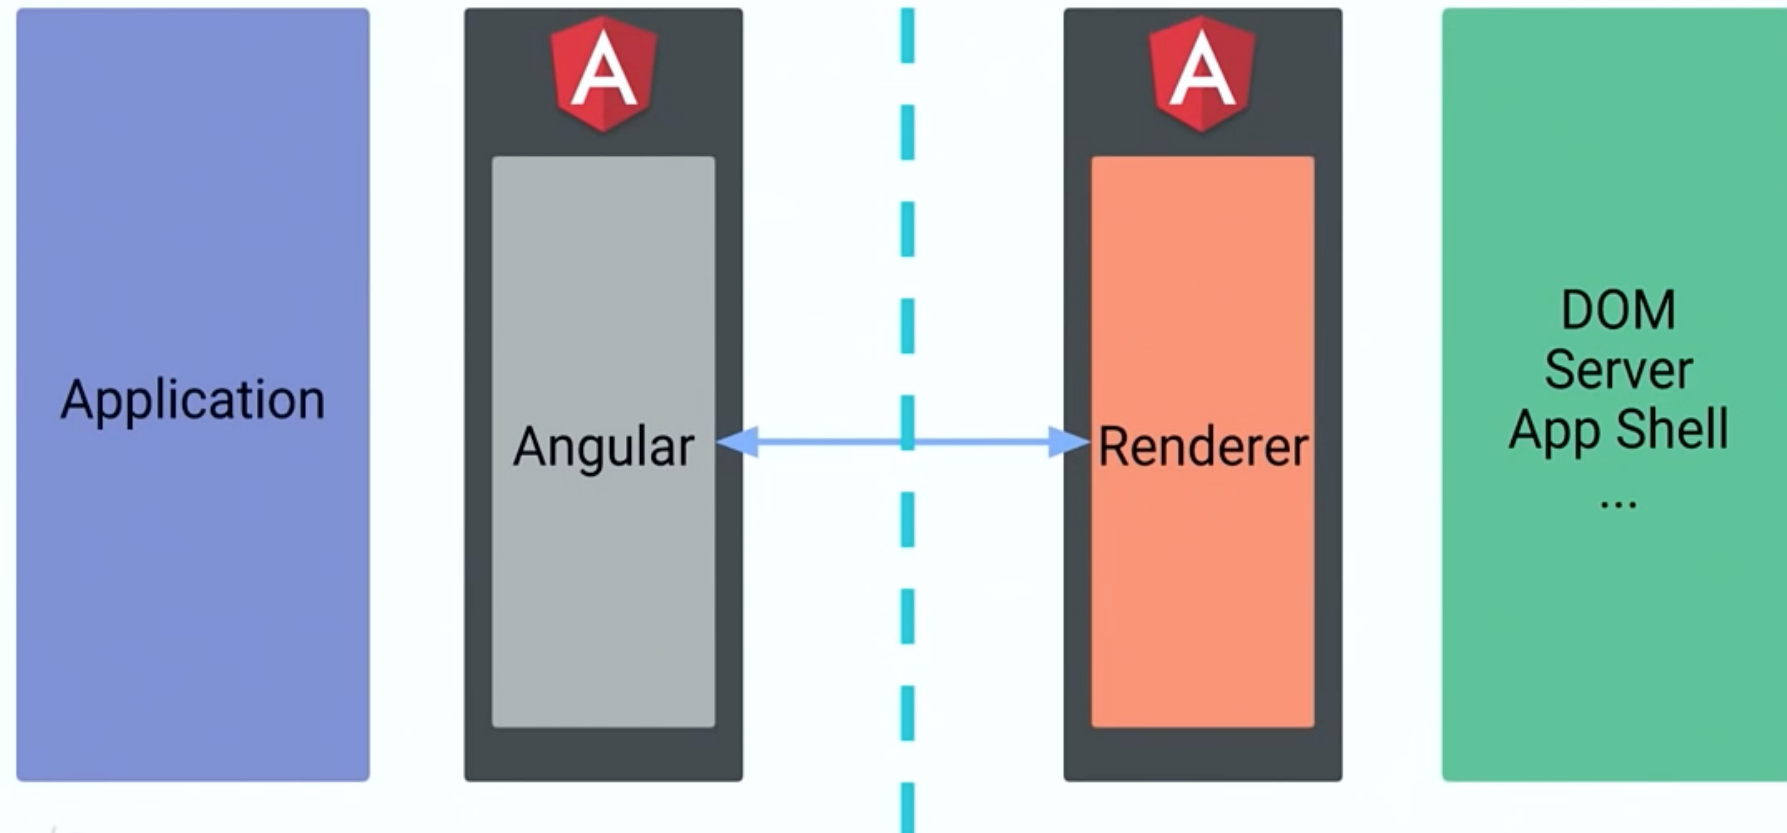

```
<my-customer>
  {{name}}
</my-customer>
```

DOM

```
<!-- myCustomerComp -->
<div ng-isolate-scope>
  <span class="ng-binding">
    Pippo </span>
</div>
```

Renderer architecture

Unified development: Web - Desktop - Mobile
